FACEBOOK İLE GİRİŞ YAP

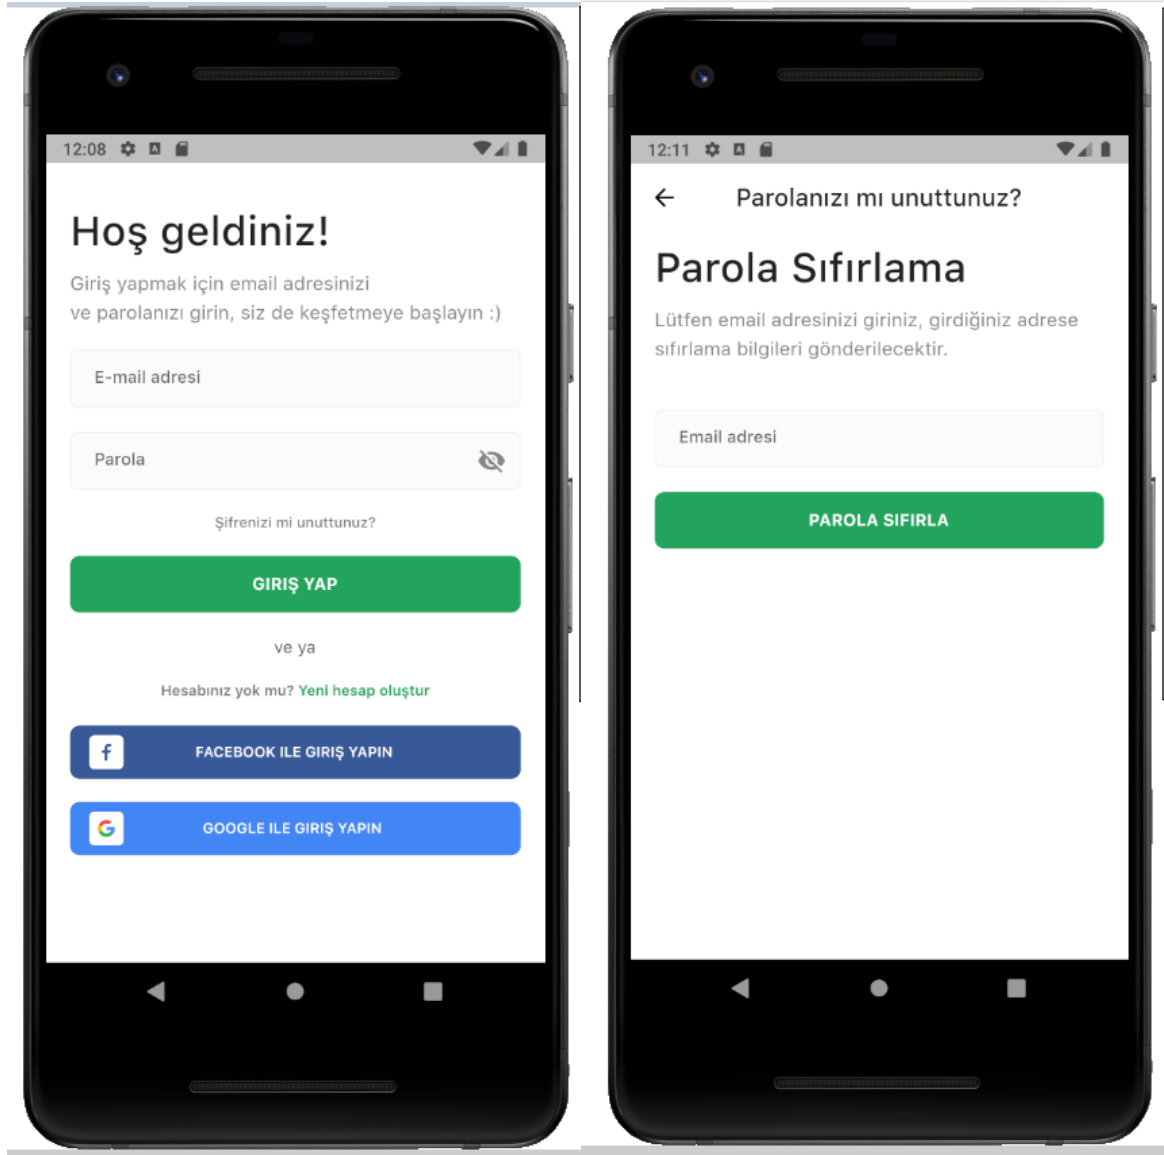

Google Sign In

In the login page, by clicking “Google ile Giriş Yap” button the system will direct users to Google’s mail authentication system. After entering Google account’s mail and password correctly. The users can log in to the application without registering.

Forgot Password

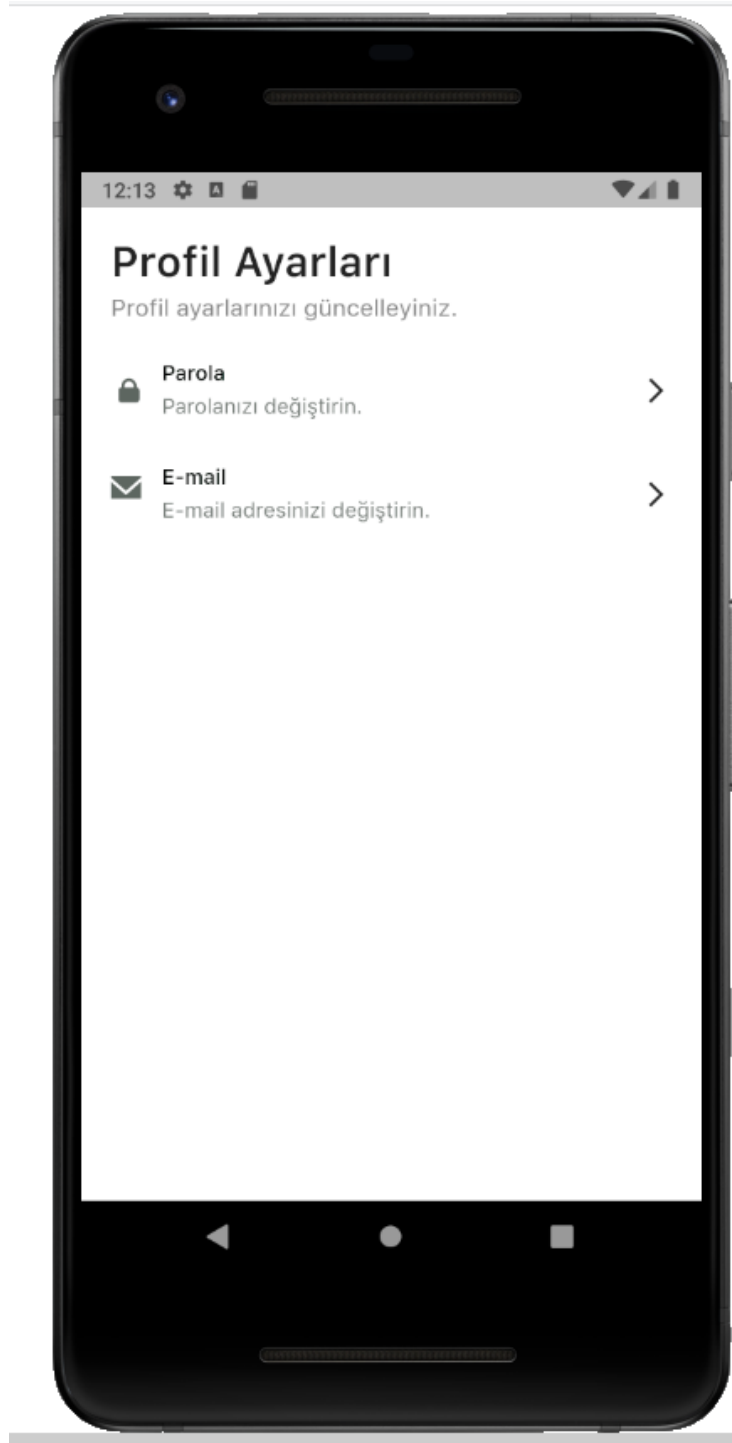

In the login page, by clicking “Şifrenizi mi unuttunuz?” text will direct users to reset password screen. In this screen, users need to type the email address which they have registered. The password resetting information will sent to the typed email.

Manage Account Credentials

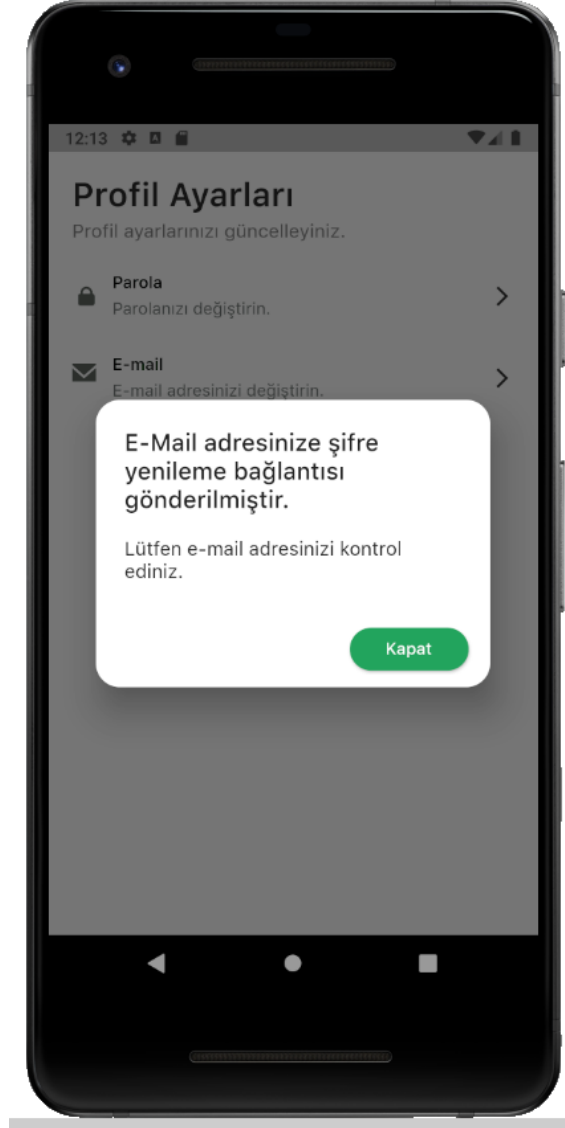

In profile tab of the application, there is list which includes multiple functions.

Changing password and email is one of those features. By clicking “Profil Ayarları” the applications ask which credentials would you like to change and directs the user in desired page.

Change Password

After pressing “Parola” button it sends a verification mail to the registered email and allows users to change their password in the system.

Change & Filter Location

By default, the location of the phone is assigned as current location. However, if the user wants to check the places nearby without going there in real. They can tap on the desired location and click “Konumu Değiştir” button.

Filters

In home screen there is a button on the top right named “Filtreler”. By clicking on that button, the application navigates user to filtering screen. In that screen users can filter their search in terms of price and rating.

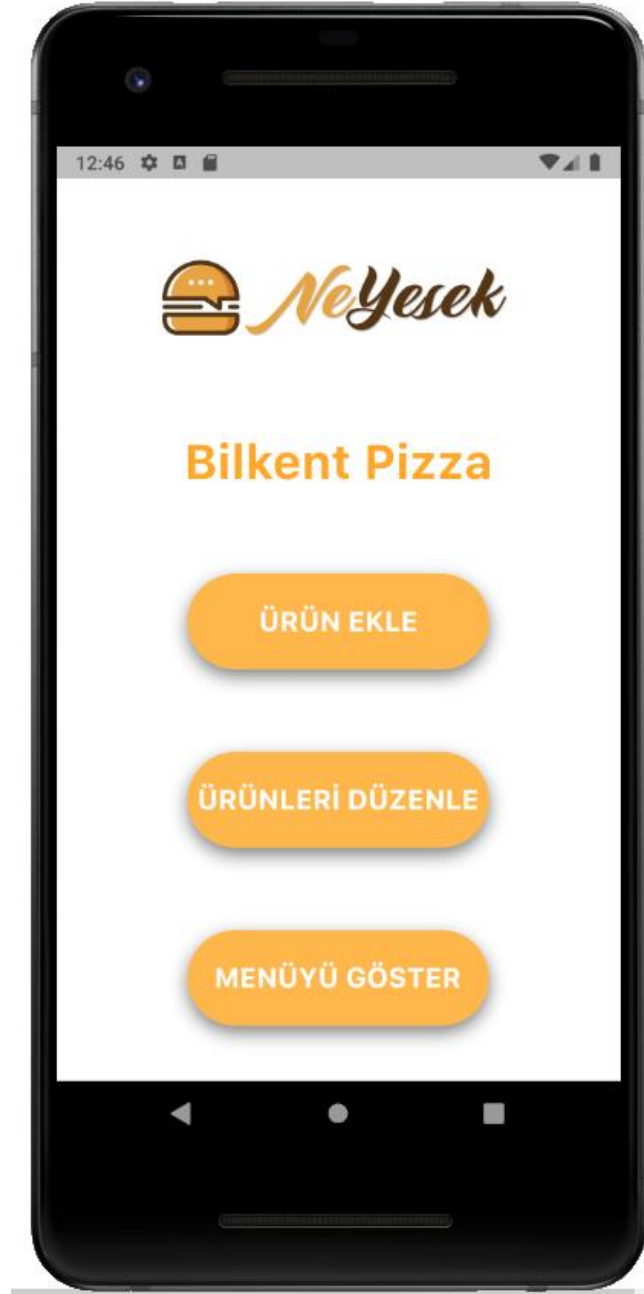

Search

In the home screen, there is a tab at the bottom. Users can click on “Arama” button to generate a search. Such as Pizza, Burger etc.

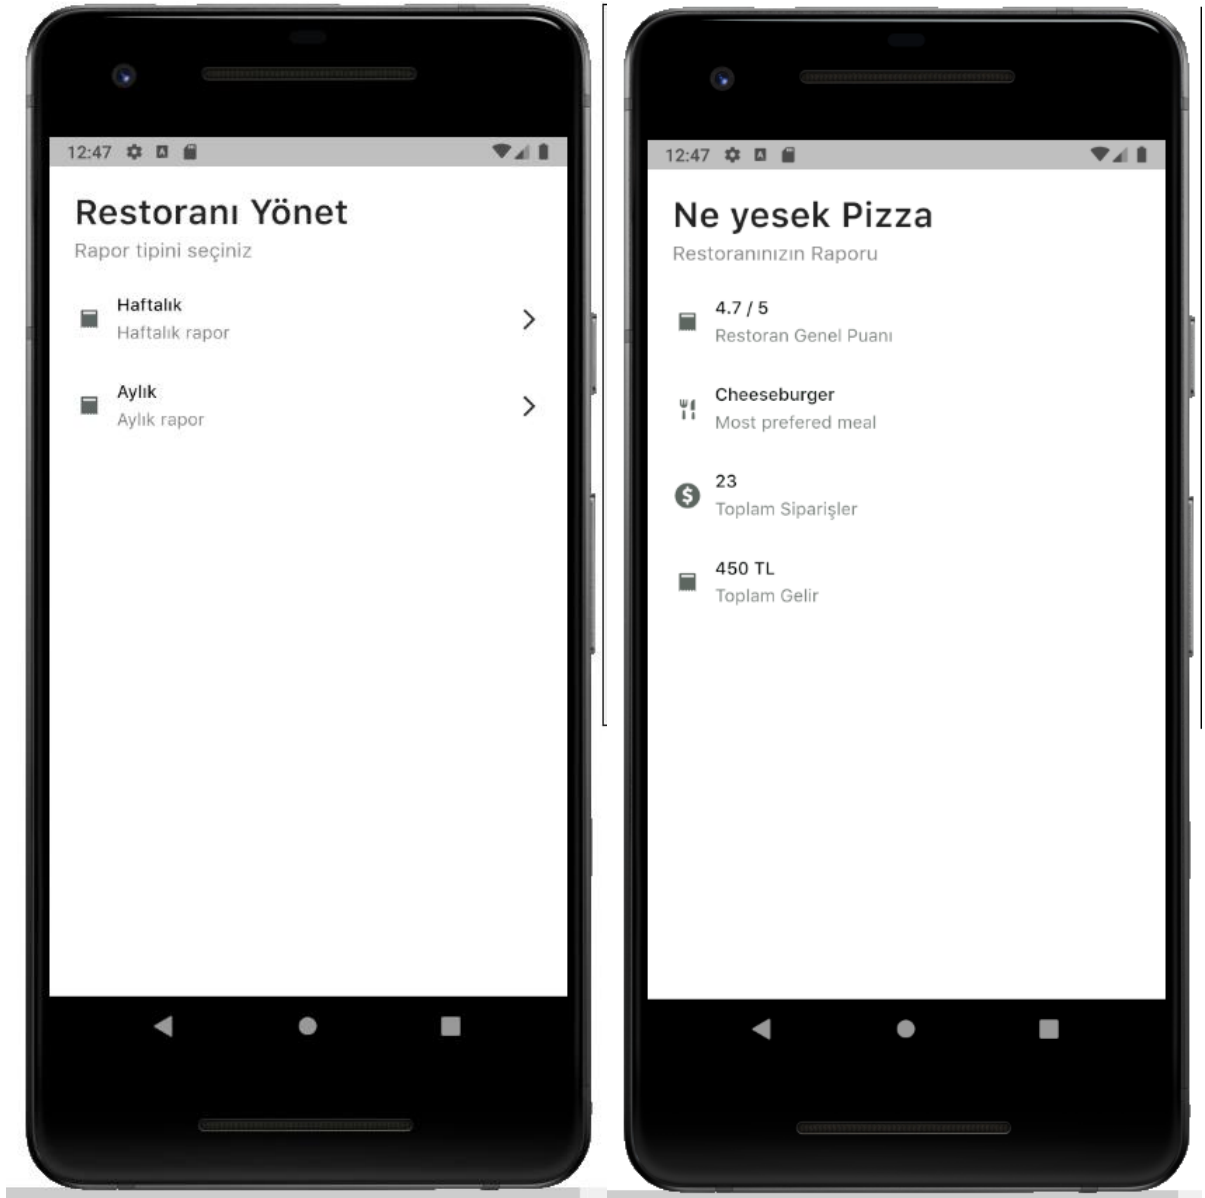

Update Menu

In the profile tab, there is a “Menü” button for restaurant type of users. This button allows restaurants to manage their menus. By clicking that button the application navigates users to a screen which have three properties: Adding food to the menu, changing an existing food or displaying the menu.

Access Data

In the profile tab, there is a button named “Restoran Raporu Oluřtur”. This button is only available for the restaurant type of users. Restaurants can check their monthly and weekly information.

Make Reservations

In the profile tab, there is a button named “Rezervasyon Yap”. By clicking that button customer type of users can create a reservation.
